Out with a bang
Celebratory fireworks nearly hit Bayside, MNS

The Faculty Senate recently rejected a proposal by the Roger Williams University General Education Committee to restructure the CORE Curriculum. The proposed plan would have led to the implementation of a long-awaited overhaul of the 35-year-old general education program at RWU. The Faculty Senate voted down the proposal 23 to six, with seven abstentions at its Sept. 7 meeting. The proposal featured many changes to the current CORE Curriculum, including: the ability for students to earn dual credits for a general education requirement and a major-specific required course, the elimination of the required CORE concentration, the elimination of a required math course, and the establishment of a first-year seminar.

In a 28 to six vote, the Faculty Senate shot down the proposed changes to the University's CORE curriculum.

School gears up for a 'wicked' weekend

Halloween is approaching fast, and members of the campus community at Roger Williams University are getting ready for the holiday weekend in many different ways. The Campus Entertainment Network (CEN) has planned events for their annual "Wicked Weekend," some students are thinking about costumes and parties, and the administration is wondering if they will have to go to extra measures to keep everyone safe and under control.

"This themed weekend is a great way of showing a spooky side of Roger Williams," Chris O'Keefe, CEN's Traditions Coordinator said. "Who doesn't enjoy wearing a costume for a little bit of time as well?" While CEN is hosting plenty of events to entertain students during the holiday weekend, Public Safety will plans on having extra officers on duty just to ensure that inappropriate celebrating doesn't get out of control. However, the administration is wondering if they should go on like it does every weekend.

"This has been a really good year in terms of campus climate," Kathleen McManus, Dean of Students, said. "We haven’t had any issues that would lead us to believe this is going to be a busy weekend." McManus said that the campus expects Halloween weekend to be anywhere near as busy as a weekend like Spring Weekend at RWU typically is. "Halloween’s on Monday. We know it’s going to be a busy weekend, so we’re going to

Online college courses don't make passing grade

Many students who find themselves taking an online course may not enjoy the luxury of sitting in their room with a computer in their lap, rather than a traditional classroom full of people. The online coursework may make it more difficult for students to enjoy their online courses as much as traditional classroom courses. For example, the University of North Carolina does not offer face-to-face freshman Spanish courses. Some professors feel that online courses are not as useful as traditional classroom settings. How can we convince our students that online courses are not as beneficial as traditional classroom settings? This is an ongoing debate in the academic community.

Editor's Desk

Let's talk about the importance of online courses, taking into consideration the advantages and disadvantages of these courses. Many students find themselves taking online courses because it is a convenient way for them to continue their education while working to earn a degree. However, online courses are not always the best option for everyone. For instance, students who are not comfortable with technology may struggle to keep up with the coursework.

In response to the article "How to make online courses more engaging," I would like to share my thoughts on the topic. I believe that online courses can be just as engaging as traditional classroom settings, but it takes effort on the part of the professor to make them more interactive. For example, professors could use multimedia tools such as videos and interactive quizzes to help students stay engaged.

Many students who find themselves taking an online course may not enjoy the luxury of sitting in their room with a computer in their lap, rather than a traditional classroom full of people. Dart's dominating presence leads Hawks to season's first win

JOSH WEINER / Herald Reporter

FALL RIVER, MASS. — The Roger Williams University Hockey team got its first win of the season last Saturday night when they defeated Castleton State College 7-3. The Hawks looked like the dominant team throughout the night, capitalizing on pressure in the Castleton zone and taking advantage of their defensive mistakes.

"I thought the team played really well in the first period," said Ed Silva, the Hawks' Head Coach. "A little slow in the second period but the third, you know, they really played well."

The two teams played a very rough game, accumulating 30 penalties throughout the 40 minutes of play. RWU took the lead early, getting penalized, getting called for six in the first period alone and getting scored on early by Castleton's Bob Rasmussen.

Senior defenseman Richard Asadorian had a strong game on the blue-line for the Hawks. Easily the biggest body on the ice, Asadorian's presence was felt wherever he was skating, making some big hits and subtle defensive plays that kept the Hawks in the game. He added two assists on the night.

"He's a big guy too," said Silva, laughing.

After getting scored on early, the Hawks stepped it up in the second period, scoring two goals. "It was a big hurdle for us," said Silva. "It's hard to determine exactly how good we are." In the next couple of games, however, they are going to have to wait.

"We got a lot of freshman on our team out a lot. I'm really looking forward to cha,; she said.

Asadorian got a lot of points on the season.

"It's only half an hour away," said Silva. "I go home twice a week to ride my own horses." she said.

Asadorian has other high priorities, however. She had to decide whether or not to apply to law school or to go into police work.

"I'm always looking to improve, she said. "I would go to my sister's lessons, she said. "I would always want a chance to improve, she said. "I would always want a chance to improve, she said."

Asadorian got enough points to be a Red-best ranked rider, while still being bumped up to the intermediate level. She will be spending 20 points away from making the same leap in the jumping category.

"It's the next step. It's the next step for me," Asadorian said. "Each and every day, I'm getting better and better."
An interview with Director Glenn Ciano and Actor Tom Denucci.

OCTOBER 10, 2013

THE HAWKS' HERALD

What inspired you to direct this film?

Glenn Ciano: I really liked the script (written by Carl V. DiGuere). I liked the way it had an old school horror feel to it. Carl did a really good job of capturing this medium. He never says, and we don't really have monster movies like this anymore. It was very appealing to me and when I met with Colin we talked about ideas and we just kind of took off run- ning and we made a big deal of it and we obviously called Inkubus. And being the matter of horror, Robert England, in the movie just wild.

Tom, how was your experience working Glenn Ciano and Chad Verdi?

Tom Denucci: This was my first time working with these guys. I had done some local work, crew work in some other movies, a lot of training and taking a lot of classes, but this really gave me the opportunity to take on something a little more challenging with a bigger role. It's been really fun.

Glenn, have you worked with Chad Verdi in the past?

Glenn: This was our first time working together. I came here trying to get another shot. I was very appealing to me and when I met with Colin we talked about ideas and we just kind of took off running and we made a big deal of it and we obviously called Inkubus. And being the matter of horror, Robert England, in the movie just wild.

Glenn, what was your favorite scene in Inkubus?

Glenn: I liked the way it had an old school horror feel to it. Everything else was kind of a roller coaster ride of effects. So that [genre] was the most fun to design and shoot. And to watch those two actors play it as well you usually don't get in a movie like this, but this is the way I am, I make a big deal out of the little moments in between the killings.

Do you have a favorite scene in Inkubus?

Tom: There was this really great scene where I really got to work with Glenn closely. It happened in a van where there's a really cool design and shoot. And to have an opportunity to take on something a little more challenging with a bigger role. It's been really fun. I had a blast.

What was the most difficult part about making this film?

Glenn: As a film maker, [the most difficult part] was the prep getting it up with the effects. I had to do on my game because we only had 15 days to shoot. It was the most difficult and most challenging part, but the most fun. I had a blast.

Do you have any other movies coming out that we should look out for?

Glenn: Another movie we are both working on is called Lacocca, which is coming out in December hopefully. Watch out for us we will be doing a lot of this kind of thing.

RUW occupies Wall Street

Student and faculty member make the trip to the Big Apple

MELODY PUCKETT | Staff Writer

NEW YORK - R.U. Libraries

In New York City, there is a certain charm in the way the streets are named. The avenues, the boulevards, the streets - all have a sense of history and culture that is unique to the city. But one name stands out among the rest: Wall Street. The home of financial institutions, it is a place where dreams are made and fortunes are lost. It is a place where the rich and powerful come to play.

But on this particular day, Wall Street was not just a place of business. It was a place of learning.

On a recent visit to New York, several students and faculty members of RUW decided to take a trip to Wall Street. They were not there to conduct business, but rather to explore the world of finance and economics.

"It was a great opportunity to see how the financial world operates," said one faculty member.

The trip was organized by the RUW's Economics Department. The students and faculty members were accompanied by their respective professors, who explained the significance of each landmark they passed.

"Wall Street is more than just a street," said one student. "It's a symbol of the American dream - the idea that anyone can make it if they work hard enough.

The students and faculty members were given a guided tour of Wall Street, which included visits to the New York Stock Exchange and the Federal Reserve Bank.

"It was an eye-opening experience," said another student. "I never realized how much goes on behind the scenes of the stock market.

After the tour, the group had lunch at a famous New York restaurant, where they discussed their experiences and learned more about the world of finance.

"I learned a lot about how the markets work," said one professor. "It's a complex system, but it's also fascinating.

The trip was a success, and the students and faculty members look forward to making it a yearly tradition.

"We look forward to doing it again next year," said one student. "It's a great way to learn about the world of finance and economics.

The trip to Wall Street was a memorable experience for all involved, and it reminded them of the importance of knowledge and education in today's world.

"This trip was a great way to learn about the world of finance," said another professor. "It's something that everyone should experience at least once."
Breast Cancer Awareness Month
The importance of a close-knit family in times of need

SHANA SIMS / Herald Reporter
Imagine being in the second grade and having your dad pick you up from school only one afternoon. "There's something I need to talk to you about," he says. And as he drives you home, he informs you that your mom just found out she has breast cancer. Your mom later explains the whole situation to you, and you find out that she has breast cancer. The process of going through the treatment is rough. When your mom needs to take a trip to the hospital on many occasions, you end up having to spend the night at your cousin's house.

This was the case for 20-year-old junior Marty Sabounjian. His mom fought breast cancer for two years while she went through chemotherapy and radiation treatment.

"Cancer is my mom's monster; it is in remission from the cancer, but this summer she got diagnosed with another form of cancer known as lymphoma. Luckily, Sabounjian's mom has been doing well, and the doctors are telling her that she is going into remission.

"She's gotten through it. She's really strong about it," Sabounjian said. "All of the treatments have been working and everything.

Unfortunately, Sabounjian's family has a history of breast cancer. His grandmother had it and he just found out that his first cousin got it as well.

His mother found out that she had breast cancer when she did a self-examination. When she went to the doctor, they did more tests and confirmed it was positive.

"Like I said, I have a very long family history of breast cancer, and with seeing that it does run in my family a lot of my aunts now, and my cousins are going and getting checked and things like that, because there's certain genes that are related to breast cancer," Sabounjian said. "So I'm just glad that my family has a history of it, but I think that should definitely get checked.

Now look around you. Have you been sitting on a lot of pink when you go, such as ribbons on the naming of Ben Affleck's workers in the Communist? Yes, it is breast cancer awareness month. Many pros are working with help in making donations buying items such as washer bottles that are the famous pink light pink color, or wearing pink wristbands. People some major wearing pink in order to support their causes. When people donate money to the cause, it goes to wards finding a cure. According to breastcancer.org, about 24.3 percent of women in the United States will have aggressive breast cancer during her life. Last year, 40,600 women in the U.S. were expected to die from breast cancer. Luckily, since 1990, these death rates have been decreasing and there are more than two billion survivors in the U.S. Breast cancer is also one of the most common cancers diagnosed in American women, aside from skin cancer. Sabounjian said he thinks that breast cancer awareness month is important in helping to raise awareness.

"I feel as time has passed, the month itself has grown in popularity and draws more attention to itself. Sabounjian said, "also it feels as time has passed, people have been affected by breast cancer, and personally I'm glad to see more individuals taking a day and doing something to make a difference."

From Africa to the United States:
Pursuing math across the world

SHANA SIMS / Herald Reporter
If you have not been to Cameroon, West Africa, then you do not know what it was like to grow up there. Dr. Huwert Kamedem, a member of a number of new professors added to the Feinstein College of Arts and Sciences this year, found his love of mathematics in that very city.

Kamedem is an assistant professor of mathematics at Roger Williams University, but his interest in math goes back to a very early age. Kamedem went through the French school system in Cameroon: it was there he had a professor who helped him determine his direction at an age where he would have been a senior in high school in the United States. This professor inspired him to pursue math at a higher level, Kamedem said.

Kamedem went to New Mexico State University in Las Cruces, N.M., where he earned his Ph.D. in Mathematics. Even though this was a large state university, Kamedem's first professional experience was at Union College, a much smaller school in upstate New York.

"I got a very good impression at Union College because I could interact with students one-on-one. I really felt I could make a difference," Kamedem said. And that is why he chose to come to RWU. "I was drawn to the small size and community. Kamedem said. Even though RWU is slightly bigger than Union, Kamedem wanted something similar to that setting, he said.

For this academic year, Kamedem said he is really looking forward to getting to know the community. He said his pride is getting to know the colleagues of course, and more importantly, the students. Kamedem said he does not want to "set the bar too high" for this year, but hopes to take advantage of the smaller size of RWU to get to know the school.

Outside of the classroom, Kamedem enjoys sports such as soccer. He hasn't played much since he got here, he said, but he still considers it something he enjoys. He also enjoys movi- ins and went to plays when he was in New York to "get a break from math and teaching," he said.

At Quinnipiac, our students are our main focus. It's why we offer 2.3 graduate degrees in fields ranging from business to health sciences. It's also why Quinnipiac was ranked a top 10 northern regional university offering a full range of masters-level programs by U.S. News & World Report and second in the northern region in U.S. News Up-Coming Schools category.

"Think Before You Gossip"

by Christopher Muskey

Everyone knows that jobs are central to our economy, so shouldn't the country support a jobs bill that will put people back to work? Americans' jobs Act could be the answer to all of our needs. The jobs Act is a win-win situation for the nation.

For the first time in our history, we have an opportunity to change our economy and create jobs. It is time to embrace the idea that spreading money will help get us out of the economic troubles we are currently in. Congress understands this notion and while we have been called to the table, it is time to create a new job for everyone.

This time is a time when bipartisanship is needed. This bill will not only help our economy, but also help create a new job for everyone. The Senate has already voted to pass this bill, and we must ensure that it is passed quickly and painlessly. This time is a time where both parties must work together for the good of our country.

For a country to work together, we must put aside our differences and come together for a common cause. This time is a time where we must come together to save the economy, so shouldn't the country support a jobs bill that will help us out of our current situation?
