College Council Tries To re-establish

The planning stage for the All College Council began in the fall of 1968 when Roger Williams College was located entirely in Providence. It evolved when student leaders from clubs and organizations met. These students found that a lack of communication existed between administration and the student body; therefore this group united to promote the elimination of this communication block. Research followed and a nonformal development committee of students, faculty and some administration constructed guidelines for the Council.

In the Spring of 1969 the Council formed consisting of six students composed of club and organization Presidents, four faculty and four administrators. The student body at that time was defunct and never reconvened. The faculty consisted of an 18 member board of faculty, students and administration. The students didn’t know what the Council was doing and this Council would try to alleviate this problem. The faculty met and approved the Council. Ron Davis was elected Chairman.

In late Spring of 1969 the Council convened for two cases, concerning two faculty members; one member was not rehired, another was hired for Providence only.

Students requested that the Council convene to check injustices of the cases. The Board convened and asked the two faculty members to appear in person before them. Neither member showed up. Students appealed again and again the Board convened by this time the Board lost some credibility.

In September 1969 the Bristol campus opened. Lack of organization prevented election of officers in Bristol. Students directly involved in the Council either graduated or transferred. The Council couldn’t maintain stability.

In the fall of 1969, Dr. Gauvey contacted Ron Davis on the status of the Council. There was no student support at that time, the people initially on the Council were not there. The Council became defunct and never reconvened.

This year, the self-evaluation report on accreditation shows that governance was not anything too strong. Dean Payson found out about the past Council and received the Council’s complete file. A new draft is in the making and was submitted to the President’s Advisory Council. The structure isn’t finalized but it consists of 18 member board of faculty, students and administration. It is a much stronger Board with more legislative ability, but do the students want it? Can the students get together? In order for this Council to be effective, it must have student support.

On Tuesday, October 26, Roger Williams College played host to a speaking engagement by an ex-con at Bristol High School Auditorium. But the speaker was no ordinary ex-con. He was David Harris, who recently completed a 30 month stint in a Texas penitentiary on a draft evasion conviction. Harris is currently touring the country, discussing with students the resistance movement, and discussing with students the various possibilities for non-violent revolution.

Harris began his talk by defining a few of the terms which are often carelessly bandoned about. He said that a revolution must have at least three important facets; first, it must be non-exclusive, that is, it must not be a revolution for those who wear their hair in a certain fashion or listen to a particular kind of music, second, it must actually meet the needs of the people in a real and vital way, and finally, it must be an exercise of genuine human love. Power, Harris said, is merely the sum of accumulated lives involved in a particular situation. Therefore he noted, it is not necessary to seize power from the government, it is only necessary to withhold it. In this way, Harris said, we can “begin to make it impossible for the monster to function.”

Harris discussed many ways in which this withholding action might be accomplished, including his own refusal to serve in any capacity in the Armed Forces or related duties. When asked by a student if he didn’t think that application for conscientious objector status was sufficient answer to the draft call, Harris replied, “I was just more of a conscientious objector than the law allowed.” Harris feels that it is possible to bring about a revolution which we live, one should not necessarily be frightened, because “jail is just freedom in a much more convenient situation.” He noted that during his 30 months in prison he instituted 4 strikes and was the subject of 26 disciplinary reports.

Harris asked if he thought that there was real progress being made by his actions and those of other students in need of extra money and applying immediately! For financial aid information, contact:

THE FINANCIAL AID OFFICE
266 PINE STREET
PROVIDENCE, RHODE ISLAND
telephone 274-2200, ext. 61

The additional funds received from the Federal Government are limited—Apply immediately!

Due to recent congressional approval of the 1971-72 Student Financial Aid Budget, Roger Williams College has been awarded additional money for the College Work Study Program.

If you are in need of extra money and feel you are qualified, contact:

Why Space?
by Alan B. Shepard, Jr.

(Chosen as one of the seven original astronauts for the Mercury man-in-space program, Alan Shepard became the first American in space with the flight of Freedom 7 in 1961. Most recently, he commanded the flight of Apollo XIV to the moon, an adventure heralded as one of history’s greatest contributions to science and research.)

To me, a charter member of the club, space is an inevitable act of science. And certainly, people who today trade the wisdom of space expenditure’s must be those who questioned the intent and usefulness of the Wright brothers’ experiments at Kitty Hawk.

It is relatively easy to correlate a satellite weather map or live television broadcast with space. But the more immediate and tangible? Science and research is serendipity demonstrated since Sputnik that a comparable level of excellence, and this level of enthusiasm, and this enthusiasm for the military. Certainly some areas are more or less certain as to its true meaning.

I was impressed by David Harris, a colleague of mine in the Tenth District, who, over the past 12 months, has done more to unite the community in a common effort and to remove the feeling of disunity and the aura of division that has existed in our community, than any other person I can think of.

David Harris has found the key to solving the problem of the Tenth District. He believes that the key to solving this problem is through education. He believes that the key to solving this problem is through education. He believes that the key to solving this problem is through education.

David Harris is a man of vision and action. He has the ability to see the big picture and to act on it with confidence and determination. He is a man of integrity and honor. He is a man who can be trusted to do what is right, even when it is difficult.

David Harris is a man of the people. He is a man who understands the concerns of the average person and who is committed to representing their interests in the political arena. He is a man who is not afraid to stand up for what is right, even when it means challenging the status quo.

David Harris is a man of the future. He believes in the power of education to create a better tomorrow. He believes in the power of education to create a better tomorrow. He believes in the power of education to create a better tomorrow.

David Harris is a man of the past. He has a deep respect for the history and traditions of our country. He believes in the importance of preserving these traditions and passing them on to future generations.

David Harris is a man of the present. He is aware of the challenges we face today and is committed to finding solutions for them. He is a man of the present. He is aware of the challenges we face today and is committed to finding solutions for them. He is a man of the present. He is aware of the challenges we face today and is committed to finding solutions for them.

David Harris is a man of the world. He has traveled extensively and has a deep understanding of the global issues that affect us all. He is a man of the world. He has traveled extensively and has a deep understanding of the global issues that affect us all. He is a man of the world. He has traveled extensively and has a deep understanding of the global issues that affect us all.
SPORTS TALK!

The Bubble Power

by Pete Greenberg

The surprising thing I learned about this structure is that it only takes twenty-four hours to assemble it and about a day or two more to lay it out in its foundation. The correct official name for it is an "air supported structure." This bubble, sometimes taking on the appearance of a U.F.O. or that of a Blob Monster, will probably be the center of attraction for the students to use it as a rallying point such as concerts, plays, speakers, singers, conventions, Winter and Spring Weekend events, etc. Also it will be used by what we call "non-athletic type" for just working out with weights or judo or just plain looking around to break up the monotony of a long and hard school day. However, this facility will enable us to create our own home Basketball games on campus to hold tennis practice as well as Baseball, indoor track, Golf, Soccer and Football. The Bubble would be open from 8:00 in the morning till 10:00 at night, seven days of the week.

Therefore, from a recreational viewpoint why was there a dilemma? Further, what does kids do during bad weather? The answer has been found and well researched by the athletic and Financial affairs Departments and the conclusion was the creation of a Bubble. So it is from this conception of a Bubble-like structure that a once-dream will soon be a reality with the support from the students.

The cost of the structure will be under the $10,000 to build a far cry from the permanent athletic facility against the likes of a four million dollar deal.

Finally, the future use of the Bubble, after the permanent gym is built, may well be used by the Hawk Hockey Team as an indoor and outdoor rink. It will hold up wards of 2-3 thousand people. The future is indeed bright for a possible RWC. No longer will this school take a back seat, either to the town of Bristol or the city of Providence for rental of athletic facilities for unreasonable costs. Get with it students, the rallying cry is out-Fight for Bubble Power!!

Brown University Coach Featured

The Roger Williams College Workshop in Modern Basketball will enter its fifth week with Jerry Alaimo of Brown as the featured speaker.

The sessions are held on Wednesday evenings at Our Lady of Providence Seminary on Regent Avenue in Providence. Lectures begin at 7:30 p.m.

Past speakers have included Jack Kraft of Villanova, Dave Gavitt of Providence College and Joe O'Brien of Assumption College.

The remaining sessions are open to the public at a small fee.

1971-72

Recreational Hockey Schedule

1. Nov. 17, 10-11, Richards, Wed.;
2. Dec. 4, 10-11, Richards, Wed.;
3. Feb. 9, 10-11, Richards, Wed.;
4. Feb. 16, 10-11, Richards, Wed.;

Open to Roger Williams College Students Faculty and Staff.

Equipment must be provided by individual participants.

Participants must be covered by the College offered Insurance program or one of comparable coverage.

by Andy Iamasca

In our last article we gave you some ideas about what to do with your wheels to get them to run a little faster. If you've gone through the trouble of getting headers, a good carb., and manifold and a good set of gears, you're about ready for some other goodies.

If your mill is still not pulling the kind of revs you would like it to, you are in need of a little distributor work. In this area I have found that trying to rebuild a stock distributor to make it perform as a good high performance item, is impossible! You will usually end up with something along the lines of a part that belongs in a junk yard rather than a screaming stocker.

Your best bet is to get in and buy a good dual point distributor. Some good ones to try are Mallory and Accel, both of which serve the purpose above and beyond the call of duty.

Some advantages of having a dual point distributor are: longer plug and point life, better spark and more even ignition. Take my word for it, it's well worth the effort.

If you have completed the prescribed modifications and you find out that you're bogging it down, you may be using your car for the street effort.

we receive too much fuel to burn effectively) the motor you are in need of a cam replacement. I do not intend to go into great detail on cam specs, but a rule to follow is, if you're using your car for the street as basic transportation it would serve you well to stay with a mild grind. If you have a definite question let us know and we'll see what we can work out.

Now we come to a very tricky subject, shifters. Behind every good driver sits a good shifter. Brands such as Hurst, K&G, P&G and Mister Gasket do a fine job, and if you run a three speed gear box we recommend the Synchro-Lok.

Now that your machine is a fire breathing, wheel standing, terror of the open highways, you need one more thing. The car isn't worth a cent if you don't know what to do with it. If you think you're going to go out and blow the doors off everything in sight, you're not.

Your car is going to react in a different manner than what you are accustomed to, so take the time and figure out what's going to happen when you "put it to the wood". But it's nice to know that you're not going to get blown off at a stop light by some little old lady in her "Flamin' Six" cylinder Dart.
